

# EXTRA POST LAB

Develop a simple C# Windows Form Application that count from zero to nine:  
Your output will be as the following:

1. From the tool box add a timer to your application and set the values of its properties properly. It should be initially disabled.
2. When the user press on start button the timer will be enabled.
3. With first timer **tick (Event handler)** counting will be start from zero and continue with timer ticks to nine.

4. When the user press on restart the timer will be disabled and counter return to zero.
5. All Number have to be drawn using graphics class on the panel.
6. See the Demo
