

# POST 7

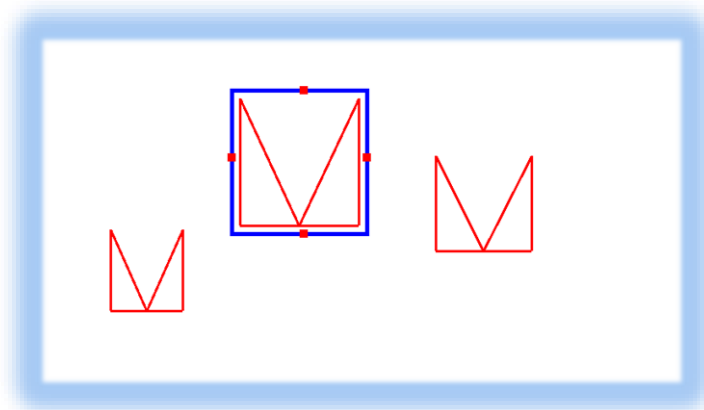

Develop a C# Windows Form Application that allows users to do all of the following.

1. Draw the following shape:

The Size of the Shape depends on the users Mouse Down and up and from any point in any direction on the Drawing Panel.

2. The user will be able to select any shape (a selected shape is distinguished by a temporary blue rectangle around it with small red points).

3. The user will be able to move the currently selected shape.
4. The user will be able to copy the currently selected shape and paste it in any position on the drawing panel.
5. The Shapes must be permanent on The Drawing Panel when the user minimize or maximize the Form.
6. The user will be able to save all shapes in a Text document selected from a save file dialog.

x1	y1	x2	y2
28	23	113	142
246	36	327	169
535	74	627	171
292	228	380	302
177	200	203	231
147	38	197	111
91	207	118	239
